JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

ease occurred daily. The origin of the outbreak has not been definitely determined. Plague was reported present in the interior of the province July 13. Importation of the infection by maritime routes appears less probable than importation by caravan from other parts of the interior, where plague foci are known to have been formed in July, 1909. The number of cases which have occurred during the present outbreak in Doukala is not reported, but it is estimated that there have been at least 10,000 deaths from plague and the mortality is stated as having been 50 per cent during the first period of the outbreak and as being at present 90 per cent. Measures to prevent the spread of the disease to the coast towns were put in force September 29.

TURKEY IN ASIA.

Tripoli—Cholera.

Consular Agent Harris reports, October 5 and 13: Cholera is present in this port. To September 29, 14 deaths were reported, and from that date to October 5 about 4 deaths daily. From October 5 to 11, 35 deaths were reported, the mortality being 63 per cent of the cases.

VENEZUELA.

Caracas—Plague and Yellow Fever.

The following information was received from the sanitary board of Caracas:

During the week ended October 7, 3 cases of plague and 4 cases of yellow fever were reported at Caracas.

CHOLERA, YELLOW FEVER, PLAGUE, AND SMALLPOX.

Reports Received During Week Ended Nov. 10, 1911.

[These tables include cases and deaths recorded in reports received by the Surgeon General, Public Health and Marine-Hospital Service, from American consuls through the Department of State, and from other sources.]
